PLACEMENT OF EARPIECE SPEAKER CUSHION

TASK

The earpiece speaker cushion is one of the more complex adhesive components of mobile phones. Placement of this small yet sophisticated part is a challenging application that requires absolute accuracy within tight tolerances. In the following pages we present a variety of solutions.

SEMI-AUTOMATED EARPIECE SPEAKER CUSHION PLACEMENT INTO RECESSED HOUSING

CHALLENGES

 The cushion consists of a foam pad that must be placed accurately into a recessed frame in the target part housing.

SOLUTION

- Model 3065
- · Customized chuck
- · Customized nest
- Benchtop configuration for semiautomatic operation
- · Rewind reel
- X-axis correction

FEATURES & BENEFITS

- AccuPlace's peeling technology allows for consistent peeling of the foam pads.
- The x-axis correction option guarantees accurate placement of the foam pad into the recessed area by correcting any possible component drift on the liner.
- The bench top platform consisting of a base with feet, built-in power supply, and 2-hand control provides a simple cost-effective solution that captures the quality benefits of automation.

FULLY AUTOMATED EARPIECE SPEAKER CUSHION PLACEMENT ONTO ELEVATED AREA

SOLUTION

- APAC
- Robot Mode RM3065
- · Integrated vision system
- Dual tray shuttle

FEATURES & BENEFITS

- The dual tray shuttle allows for semi-automated operation. The operator loads/unloads one tray shuttle while the APAC assembles on the other. The only other operator responsibility is changing rolls of adhesive.
- The vision system ensures accurate assembly of the foam cushion onto the elevated area by scanning both the adhesive and the target part before assembly.

CHALLENGES

- The cushion consists of a foam pad that must be placed accurately onto an elevated area surrounding the earpiece.
- Dark and non-reflective housing makes accurate part detection and component placement more difficult.

AUTOMATED PLACEMENT OF 3-DIMENSIONAL COMBINED EARPIECE SPEAKER MESH AND CUSHION

CHALLENGES

- The part a combined earpiece speaker mesh and cushion - has a threedimensional shape that does not correspond to zoned glued areas of the component.
- Placement in very tight tolerances is required with little guidance in the target part housing.

SOLUTION

- APAC
- Robot Mode RM3065
- · Customized tooling
- Integrated vision system
- · Peel edge stripper assembly
- Rewind reel

FEATURES & BENEFITS

 AccuPlace's peeling technology along with customized tooling allow for consistent peeling of the adhesive component. The customdesigned chuck first places the component horizontally then incorporates air pressure for accurate placement of the die cut component in its three-dimensional form.

- By controlling both peel and place position the integrated vision system ensures
 accurate placement even onto reflective housings which have no concrete
 assembly reference.
- The peel edge stripper assembly prevents parts that are not seen (and therefore not picked up) from interfering with the liner drive mechanism and facilitates continued production without interruption.
